

## Contents

### INTRODUCTION

Tragedy of Minamata Disease and Environmental Chemical Problems Today	1
1. Outline of Minamata disease	1
(1) Outbreak of Minamata disease and its casualties	1
(2) Tragedies of Minamata disease	2
(3) Confirmation of the causes of Minamata disease by the Government	3
2. Mechanisms underlying the outbreak of Minamata disease and morbid conditions	4
(1) Mechanisms underlying the by-production of methylmercury and the outbreak of Minamata disease	4
(2) Morbid conditions of Minamata disease	5
3. Learnings of Minamata disease	7
4. The object of the present compilation	8

### CHAPTER 1.

Movements during the Period from the Times When the Signs Appeared to May 1956 When Minamata Disease was Officially Discovered	10
1. Background of the times, positioning of Chisso in industrial policy, position of Chisso in economic society of the district, and characteristics of the technological development by Chisso	10
(1) Situation of economy	10
(2) Position of Chisso in the local economic society	10
(3) Positioning of the Chisso Minamata plant in the industrial policy in Japan	13
(4) Characteristics of the technological development in Chisso	15
2. Early signs before the official discovery of Minamata disease	17
(1) History of disputes about the fishing industry	17
(2) Abnormal phenomena in organisms and the occurrence of Minamata disease	18
3. Legislation regarding countermeasures against pollution	21
(1) Prewar legislation	21
(2) Legislation in the beginning of the postwar period	21
(3) Legislation of environmental pollution and "harmony with industries"	22

### CHAPTER 2.

The Process of Investigation of the Cause of Minamata Disease and of Decision of the Pollution Source (Part 1) --Circumstances during the period from May 1956 when Minamata disease was officially discovered to July 1959 when the Study Group of Kumamoto University School of Medicine, (Kumamoto University Research Group) presented the organic mercury hypothesis—	24
1. Construction of the quick investigation system for the cause immediately after the official discovery of Minamata disease	24
(1) The day of official discovery of Minamata disease	24
(2) Construction of the quick countermeasure system composed of physicians, universities or colleges, and local government	24
(3) In about 6 months, the Kumamoto University Research Group narrowed down the cause of the disease to consumption of the fishes and shellfishes, which were contaminated by chemical substances.	25
(4) Initial countermeasures by the Government	27
(5) Experiments on cats	28
2. A reply from the Ministry of Health and Welfare in September 1957 regarding the application of the Food Sanitation Act and movements in response to the report of research by the Public Welfare Science Research Group in June 1958	29
(1) A reply from the Ministry of Health and Welfare regarding the application of the Food Sanitation Act	29

(2) Narrowing down of chemical substances by the Public Welfare Science Research Group Sponsored by the Ministry of Health and Welfare	30
3. Movements in response to the change of the drainage channel in the process of acetaldehyde production in September 1958	31
(1) Change of the drainage channel in the process of acetaldehyde production by Chisso	31
(2) Broadening of the contaminated area and the new patient of Minamata disease, which were due to changes of the drainage channels for the waste water	31
4. The situation of the patients	33
(1) Measures taken under suspicion of an infectious disease	33
(2) Poverty of the patients' families that were not improved despite the denial of the possibility of infectious disease	34
5. The name of the disease, Minamata disease	35

### CHAPTER 3.

#### The Process of Investigation of the Cause of Minamata Disease and of Decision of the Pollution Source (Part 2)

--Circumstances during the period from July 1959 when the organic mercury hypothesis reported by the Kumamoto University Research Group to May 1965 when Minamata disease in Niigata Prefecture was officially reported via the agreement with the present of money in token of the company's sympathy —	39
1. Presentation of the organic mercury hypothesis by the Kumamoto University Research Group and responses of Chisso to the presentation	39
(1) Presentation of the organic mercury hypothesis by the Kumamoto University Research Group	39
(2) Fishing people's demands for compensations	40
(3) A petition of opposition to the cessation of drainage was presented to the Prefectural Governor by the Minamata City Government and various groups of the district	41
(4) Approach of the Government	41
(5) Mediation for compensations by the Kumamoto Prefectural Governor	43
(6) Counterarguments of Chisso and Japan Chemical Industry Association against the organic mercury hypothesis offered by the Kumamoto University Research Group	44
(7) Movements of the establishment of "Cyclator (Circulation and sedimentation flow system)"	46
2. Breakup of the special sectional committee of food poisoning in Minamata in the Food and Sanitation Investigation Committee after the report in November 1959 and movements of the Tamiya Committee of the Japan Chemical Industry Association and Minamata Disease General Investigation and Research Liaison Council established in January 1960	49
(1) Breakup of the special sectional committee of food poisoning in Minamata in the Food and Sanitation Investigation Committee, Ministry of Health and Welfare	49
(2) Minamata Disease General Investigation and Research Liaison Council of the Government	50
(3) The Tamiya Committee of Japan Chemical Industry Association	51
3. Social function of the contract of the victims with Chisso about a present of money in token of the company's sympathy	52
(1) Contract of the victims with Chisso about a present of money in token of the company's sympathy	52
(2) The beginning of the Minamata disease certification system for the people affected	53
(3) Certification of Minamata disease patients after the contract about the present of money in token of the company's sympathy	53
(4) Detection of patients with fetal Minamata disease	55
(5) Medical countermeasures against Minamata disease patients	56
(6) Labor dispute of Chisso-- the stabilized wage disputes	56
4. Survey of mercury level in hairs in Kumamoto Prefecture during the 3-year period after 1960	57
5. The statement by Prof. Irukayama and his co-workers about the extraction of organic mercury from factory wastes in the process of acetaldehyde production	59
(1) Confirmation of the methylmercury compound in the factory wastes by the Technology Division of the Chisso Minamata plant	59

(2) Extraction of organic mercury by Prof. Irukayama and his co-workers of the Kumamoto University Research Group	59
(3) Approach of the Government and so on to the report on extraction of organic mercury	59
6. Report on Minamata disease at the international conferences	60

#### CHAPTER 4.

The Process of Investigation of the Cause of Minamata Disease and Confirmation of the Pollution Source (Part 3) --During the period from May 1965, when the outbreak of Minamata disease in Niigata was officially reported, to September 1968 when the Government's unified policy toward the disease was reported--	61
1. Outbreak of Minamata disease in Niigata	61
(1) Outbreak of Minamata disease in Niigata	61
(2) Countermeasures against Minamata disease in Niigata by the Niigata Prefectural Government, Niigata University, and the Government	61
(3) Efforts to investigate the cause of Minamata disease in Niigata and counterarguments of Showa Denko against the data from the investigation	63
2. Movements after the official presentation of Minamata disease in Niigata	65
(1) Activities of the victims	65
(2) The collective view of the Government	65

#### CHAPTER 5.

Discussion and Learnings	68
1. Approach to environmental pollution before the outbreak of damages to health or before discovery of damages to health	
Discussion 1 The ideal mechanisms underlying the early comprehension of abnormalities in living things, its use for the prevention of damages to health, and the early detection of damages to health.	68
2. Initial approach	
Discussion 2 The ideal initial approach to the occurrence of a disease of unknown cause	71
Discussion 3 What is the cause of discrimination against Minamata disease patients? What kind of approach will be taken to the cause?	75
3. Health screening	
Discussion 4 How was health screening of the inhabitants in the contaminated district conducted in the process of inspection of the cause of Minamata disease?	77
4. Inspection of the cause	
Discussion 5 How were the investigators involved with inspection of the cause of Minamata disease?	81
Discussion 6 What should be expected from the company as its social responsibility for inspection of the cause? How should the company approach to the environmental pollution? How will acts to prevent environmental pollution be expected from companies and the business organization, which are involved with chemical industries?	84
Discussion 7 How was the role of the Government in inspection of the cause of the disease and how were relationships among the ministries and offices concerned? How was the role of the Prefectural Government in inspection of the cause?	88
Discussion 8 How did the outbreak of Minamata disease in Niigata Prefecture influence on Minamata disease in Kumamoto?	94
5. Countermeasures	
Discussion 9 What position did Chisso take in postwar chemical industries and industrial policies as well as the local community? How did the the position influence inspection of the cause?	96
Discussion 10 How about the change of the drainage channel by Chisso?	98
Discussion 11 What is the Chisso's intention of having set up the "Cyclator" and how were the acts of the maker of environmental pollution-preventing equipments set up? What is expected from the prophylactic countermeasures of companies against environmental pollution?	100

Discussion 12 What kind of countermeasures should the Kumamoto Prefectural Government and the Government have considered? How could these countermeasures have been realized? ..	102
6. Decision of policies	
Discussion 13 How was the priority order of policies and values? .....	106
Discussion 14 How was the relationship between politics/administration and scientists? How were the roles of politics/administration and scientists? How were social obligations and ethics of scientists (particularly those who study environmental pollution)? .....	109
Discussion 15 How about the roles of the mass media? .....	112
Discussion 16 How did the police and the public prosecutors office function .....	114
Discussion 17 How did the patients act? .....	116
Discussion 18 How did the local residents approach to the problem? .....	117
Discussion 19 What role did the labor union of the causative company play? .....	119
Discussion 20 What do outbreak of fetal Minamata disease mean? How about the approach to them? .....	120
 CHAPTER 6.	
Comprehensive Learnings from the Minamata Disease Affair .....	122
 EPILOGUE	
Problems with Environmental Pollution, which Man is Now Confronted with--Conclusions— .....	124
References .....	125
Comments of the Study Group Members .....	126
Chronology of Minamata Disease .....	133
